This booklet will help you enjoy a safe and fun time playing games, videos, sports, and the internet. By taking safety place, there are rules to keep you safe.

Chapter 1: Your Personal Information

Your name, your school, your address, your phone number, and your birthday are personal information. They are like your secrets — only share them with people you trust.

On the internet, there are people you have never met. Even if someone seems friendly, do not share personal information with strangers online.

This includes:

Your full name and surname

Your school name

Your home address

Your phone number

Your parents' names or workplace

Photos of your house or school

Think of it this way: you would not shout your home address on a busy street. The internet is like a very, very big street.

Chapter 2: Passwords Are Your Shields

A password is like a key to your house. You would not give your house key to a stranger, right? The same goes for passwords.

Here are the rules for strong passwords:

Make them long — at least 8 characters

Mix letters, numbers, and symbols

Never use your name or birthday

Never share your password with friends

Use a different password for each account

If someone asks for your password online, that is a big red flag. Never share it, no matter how friendly they seem.

Chapter 3: Online Strangers

Some people on the internet pretend to be children when they are actually adults. This is called "catfishing," and it can be dangerous.

Here are warning signs:

Someone you do not know asks to be your friend

They ask for your photo or personal information

They want to meet you in person

They ask you to keep secrets from your parents

They offer you gifts or money

If any of these happen, tell a trusted adult immediately. You will never be in trouble for telling — you will be praised for being smart and brave.

Chapter 4: Ask an Adult for Help

If you see something online that makes you feel confused, scared, or uncomfortable, tell a trusted adult right away.

A trusted adult is:

Your parent or guardian

Your teacher

Another family member you trust

You do not have to fix the problem yourself. Adults have the tools and knowledge to help.

It is never "snitching" to tell an adult about something dangerous online. It is being safe and smart.

Chapter 5: Cyberbullying Basics

Cyberbullying is when someone uses the internet to be mean, embarrass, or hurt another person. This can happen through messages, comments, or sharing photos without permission.

If someone is being mean to you online:

Do not reply — bullies want a reaction

Block the person

Save the evidence (take a screenshot)

Tell a trusted adult

Remember: being kind online is just as important as being kind in person. Think before you type. Ask yourself: "Would I say this to someone's face?"

Chapter 6: Being a Smart Surfer

The internet is a tool, and like all tools, it is best when used wisely.

Be a Smart Surfer by:

Protecting your personal information

Using strong, unique passwords

Never talking to strangers online without adult permission

Telling a trusted adult if something feels wrong

Being kind and respectful to others online

Using the internet for learning, creativity, and fun

The internet can open doors to amazing things — learning, connecting with friends, and exploring new ideas. Stay safe, stay smart, and enjoy the journey.

What We Learned

- Personal information should be kept private online.
- Strong passwords protect your accounts and data.
- Not everyone online is who they say they are.
- Telling a trusted adult about online problems is brave, not snitching.
- Cyberbullying is wrong, and there are steps to take against it.

Discussion Questions

1. What personal information should you never share online?
2. Why is it important to have different passwords for different accounts?
3. What would you do if someone you do not know sent you a message online?
